

Antibacterial & Antifungal Testing of Textiles

Textiles are treated with antibacterial or antifungal finishes for many purposes. There are a wide array of Testing Methods available which can be used to measure the levels of activity, either quantitatively or qualitatively. These Methods can also be adapted to suit specific claims and requirements.

Testing can be carried out on products such as clothing, household textiles, floor coverings, shoe linings, bedding materials etc.

A sample of the test methods available:

ISO Standards

- BS EN ISO 20743
- BS EN ISO 20645

Other Methods

- SNV 195920
- IBRG TEX13/005/1.0

Tests for Bedding Materials

- BS EN 12935:2001
- BS 1425
- EN 1884

JIS Standards

- JIS L 1902
- JIS Z 2801

AATCC Methods

- AATCC90
- AATCC147

ASTM Methods

- E2149
